## Sicily 2006 Read Me First!

This package is a .ZIP archive. You must download it and extract all the files into a single folder for it to work.

1. Click on the link to download the .ZIP file. By default it will download into the Downloads folder.

 Create a new folder for the contents named Sicilia 2006. (For convenience, I just created a folder on the desktop. Location doesn't matter; just remember where it is when you extract the .ZIP file.)

3. Open the Downloads folder and locate **Sicilia2006.zip**.

- 4. Double-click **Sicilia2006.zip** to open it. This opens the .ZIP archive, so you can see the contents.

5. On the top bar, click the **Extract All button.** This opens a file selector for the destination to extract files into.

- 6. Click the Browse button and select the Sicilia 2006 folder you created in step 2.
- 7. Select the file and click Extract. This opens a popup showing the process of the extraction.
- 8. When the process is finished, you can close **Sicilia2006.zip** and open the **Sicilia 2006 folder**. It contains several folders and files.
- 9. Locate the icon for Sicily Final.exe (the English version) and double click to start the program.

10. *If you have a current version of Microsoft Defender installed, it may warn you about the software.* Click the **More info** link.

11. I promise there is nothing malicious in the software (though there are some photos of corpses in the catacombs!) so feel free to click the **Run anyway** button.
